Professional Summary

A front-end engineer with a graphic design degree and five years of experience in B2B/B2C e-commerce. Transitioned to working fully remote for a European market leader in wholesale products. Later joined Pleio, which exclusively operates for non-profits, where I built an intranet for 2 million active users, fully open source. My experience also spans large-scale SaaS platforms. I'm currently employed building an LMS product used by Dutch mbo students.

Work Experience

Frontend developer - Brainstud / Allyoucanlearn

Zwolle / Hybrid | 2025 - present

Building an extremely well-architected Next.js frontend with an API layer through React Query, and a Laravel back-end, using the Shape Up methodology — which means working quite autonomously. In the office about once, sometimes twice a week. Building, with a small team, an LMS system for Dutch MBO students.

NextJS ,React Query ,API hooks ,Interface desig ,Ownership ,TypeScript ,Ownership

Software Developer - Exact Online

Hybrid Leeuwarden | 2024 - 2025

Worked on a Vue2, Class based TypeScript + AlpineJS (Webcomponents) front-end which was used by close to all small MKB construction companies in the Netherlands.

Front-end developer - Pleio

Remote | 2022 - 2024

Fully open-source building projects for the government (FSV – Fraud Signaling Portal) and an intranet for non-profit/government use, serving roughly 2 million unique users."

Software developer - Distil/Lasaulec

Remote | 2022 - 2023

Worked on an inventory management application built in React and .NET. Later on, redesigned and rebuilt the entire frontend of the main shop of the company, which is a European market leader in the wholesale of bits, bolts, and tools. The backend was in .NET, and the frontend consisted of Razor templates (CSHTML), JavaScript (a mix of vanilla, KnockoutJS, and some legacy jQuery).

React Nextjs

Front-end developer - Tickles Digital Agency

Joure/Lemmer/Hybrid | 2017 - 2022

Started as an intern and later became a full-time employee. Built B2B and B2C Magento 1 and later Magento 2 webshops, ranging from small companies to larger-scale businesses such as[Link](https://www.vedder-vedder.com/) Vedder & Vedder.

Education

Graphic Design in Interactive design

ROC Friese poort | - 2022

Skills

JavaScript React Node.js TypeScript Git Docker NextJS GraphQL REST

(S)CSS, Less, Styled Components, Tailwind ❤️ Bash Shell 🐍 Python

Learning HonoJS, NestJS, Postgres, SQLite, Devops SSH (neo)vim AI

ORM's (drizzle, prisma) Ci/CD (P)npm, yarn, bun.. The things you expect.

Projects

Roll your own authentication - <https://github.com/remcostoeten/nextjs-15-roll-your-own-authentication>

People in the JavaScript community often cry that authentication is so hard. Thus my mission is to showcase it is not. A almost completely libraryless solution to self hosting your auth with secure email and password, Github, Discord and Google oAuth2 services but very easily extendible through adapters.

Containing features such as:

- Email PW
- oAuth adapters
- Rate limiting
- Full CRUD of user profile
- Middleware
- Admin roles
- User management
- User invitation to workspace

Far from done, but is a project ever done?

CLI tooling - <https://github.com/remcostoeten>

Got loads of different CLI tooling for productivity

- Automatically create turso.tech (cloud sql) database, retrieve ENV to clipboard or overwrite existing .env with a flag and more
- Certain formatting tools
- Recursive (ai) searching tools for bad patterns
- Automatic docstring insertion with or without local ai

And loads of other experiments. Currently dabbling in Solid/Svelte/Qwik. Also got a Tauri (Rust + Typescript) desktop app going on. 150 repositories and counting....
